

Daniel Yosep

Engineering Manager • Enterprise Architect • Distributed Systems • Platform Modernization • AI Transformation • DevOps • Event-Driven Architecture

Tangerang, Indonesia

[Email](#) | [Phone](#) | [LinkedIn](#) | [GitHub](#)

EXECUTIVE SUMMARY

Engineering Manager with 11+ years building enterprise platforms across Retail, Telecommunications, and Insurance. Experienced leading engineering teams of up to 10 engineers while architecting distributed systems serving 8.7M customers and 2,510 retail stores. Expertise in platform modernization, AI transformation, distributed systems, and engineering leadership.

EXECUTIVE METRICS

- 11+ Years of Enterprise Software Engineering
- 8.7M Customers | 2,510 Stores | 12,587 Users
- 18–22M Inventory Records Daily
- 24 Redpanda Topics | 2.1M Messages
- 10K–12K Payment Transactions/Day
- IDR 25B Business Impact (Cost Optimization + Loss Prevention)

CAREER HIGHLIGHTS

- Led engineering teams across Retail, Telecom, and Insurance
- Architected Project Ganesha Enterprise AI Platform
- Built Customer Loyalty Platform serving 8.7M customers
- Designed event-driven inventory platform (18–22M records/day)
- Modernized Offline-First POS across 1,546 stores
- Delivered Enterprise Payment Platform (13+ payment channels)
- Reduced infrastructure & observability costs by ~IDR 7B annually

Professional Experience

Engineering Manager | PT Toys Game Indonesia (Kawan Lama Group)

March 2023 – Present

Role Overview

As Engineering Manager, I lead enterprise platform modernization initiatives across six business units, driving engineering strategy, people development, platform architecture, and delivery of mission-critical retail systems supporting nationwide operations.

Engineering Leadership

- Leading a cross-functional engineering team of 9 engineers.
- Responsible for engineering hiring, architecture governance, delivery management, sprint planning, performance reviews, stakeholder management, release governance, incident management, and mentoring.
- Promote a technology-agnostic engineering culture, encouraging senior engineers to solve business problems rather than specialize in a single programming language.

Key Achievements

- Architected **Project Ganesha**, an enterprise AI platform built using LibreChat, Google Gemini, AWS Bedrock (PoC), Chainlit (PoC), and Keycloak, driving enterprise AI adoption and engineering productivity.
- Architected Enterprise Retail Platform supporting 2,510 retail stores, 6 business units, and 12,587 internal users.
- Designed an event-driven Cycle Count Platform using Ruby on Rails and Redpanda, synchronizing 18–22 million inventory records daily through 24 topics and 2.1+ million asynchronous messages, reducing potential inventory losses by approximately IDR 18 billion.
- Built Customer Loyalty Platform serving 8.7+ million registered Informa customers.
- Led modernization of an Offline-First POS platform deployed to 1,546 stores using SymmetricDS bi-directional replication, supporting up to 88,177 daily transactions.
- Migrated observability from New Relic to self-hosted SigNoz, reducing annual operational costs by approximately IDR 2 billion.
- Contributed to OpenShift to Docker Swarm migration, reducing infrastructure costs by approximately IDR 5 billion annually.
- Designed centralized Price Engine managing 6.2M pricing records across 892K products.

Core Technologies

Ruby on Rails • .NET • PostgreSQL • SQL Server • Redpanda • Docker • Docker Swarm • SymmetricDS • LibreChat • Google Gemini • Keycloak • GitHub Actions • SigNoz • REST API

Professional Experience

Software Engineer → Supervisor Software Engineer → Engineering Manager

PT Supra Primatama Nusantara (Biznet)

July 2015 – September 2021

Career Progression

Promoted twice from Software Engineer to Supervisor and Engineering Manager, leading enterprise digital transformation initiatives across Billing, ERP, Finance, Payment, OSS, HR, Warehouse, and Customer platforms supporting nationwide ISP operations.

Engineering Leadership

- Led a cross-functional engineering team of **10 engineers**.
- Responsible for engineering leadership, hiring, architecture planning, release governance, stakeholder management, and technical mentoring while partnering with Finance, HR, Sales, Network, Customer Service, and Infrastructure teams.

Key Achievements

- Architected and delivered an Enterprise Payment Platform supporting hundreds of thousands of ISP subscribers, processing approximately 10,000–12,000 payment transactions per day.
- Integrated more than 13 payment channels including Host-to-Host Banking (BCA, Mandiri, Permata, Citibank, BRI), Virtual Accounts, Midtrans, Visa, Mastercard, GoPay, OVO, Tokopedia, Indomaret, and Alfamart.
- Implemented automated MT940 bank reconciliation, significantly reducing manual financial reconciliation and improving payment accuracy.
- Participated in enterprise billing transformation from SAP Business One → Amdocs Billing → SAP A1 → SAP HANA, developing middleware and custom Java integrations.
- Designed and developed OSS Auto Provisioning Platform integrating Huawei, Cisco, ZTE, Nortel, and Brocade network infrastructure using Perl, Bash, and PHP.
- Automated customer internet provisioning, installation material calculation, Drop Point recommendation, and mobile installer integration.
- Delivered enterprise Finance Platform including Online Payment, Credit Note, Refund, and Reconciliation modules.
- Modernized software delivery by introducing Jenkins CI/CD, Bitbucket deployment workflow, Pentaho ETL, containerization, and SQL Server Active-Passive architecture.

Core Technologies

Java • PHP • Perl • Bash • SQL • SAP Business One • SAP A1 • SAP HANA • Amdocs • Pentaho • SQL Server • MySQL • Jenkins • Bitbucket • Docker • Enterprise Integration

Professional Experience

Tech Lead Engineer | PT Ignite Service Indonesia (Roojai)

October 2021 – February 2023

Role Overview

Early engineering team member responsible for building digital insurance platforms, enterprise integrations, pricing services, and engineering standards.

- Led a team consisting of 1 Backend Engineer and 1 Frontend Engineer.
- Built a digital insurance registration platform using Vue.js and Node.js.
- Designed and implemented the Radar Pricing Engine for insurance quotation, risk assessment, age calculation, and premium pricing.
- Integrated Salesforce using OData for enterprise data synchronization.

- Integrated Sompo TPA services using Java.
- Integrated Xendit Payment Gateway supporting online payment capabilities.
- Established engineering standards, architecture decisions, and delivery practices during the early growth of the Indonesia engineering team.

Software Engineering Intern | PT Putra Damai Solusindo

April 2014 – July 2014

- Developed POS Reporting System using C#.
- Developed Payroll Management System.
- Optimized SQL queries to improve application performance.

Core Technical Expertise

Leadership: Engineering Management, Technical Leadership, Hiring, Architecture Governance, Stakeholder Management

Architecture: Enterprise Platform, Distributed Systems, Event-Driven Architecture, REST API, Platform Modernization

Languages: C#, .NET, Ruby on Rails, Java, PHP, Node.js, JavaScript, Perl, Bash, SQL

Cloud & AI: LibreChat, Gemini, Bedrock, Keycloak, Chainlit

Database & Messaging: PostgreSQL, SQL Server, MySQL, Redis, Redpanda, Kafka

DevOps: Docker, Docker Swarm, Jenkins, GitHub Actions, Linux, SigNoz, OpenTelemetry, New Relic

Enterprise Systems: SAP, SAP HANA, Amdocs, Salesforce, Keycloak, SymmetricDS, Midtrans, Xendit

Education

Bachelor of Computer Science

Bina Nusantara University

2011 – 2015
